PROFESSIONAL SUMMARY

Entry-level DevOps Support Engineer with hands-on experience in Linux, Amazon Web Services (AWS), Docker, Git, GitHub, GitLab CI/CD, Bash scripting, Python, and application deployment. Skilled in containerization, Linux troubleshooting, backup automation, CI/CD pipelines, AWS EC2 deployment, and basic cloud operations. Strong problem-solving skills with practical experience in deploying and troubleshooting web applications.

TECHNICAL SKILLS

DevOps & Cloud: AWS EC2, IAM, S3, VPC, CloudWatch, Docker, Docker Compose
CI/CD: GitLab CI/CD, Build & Deployment Pipelines, Automated Deployment
Linux: Linux Administration, Bash/Shell Scripting, User Management, File Permissions, Process & Service Troubleshooting
Containerization: Docker, Dockerfile, Images, Containers, Networking, Volumes, Docker Scout
Version Control: Git, GitHub, GitLab, Branching, Merging
Python: Python Scripting, Pandas, NumPy
Programming & Web: Node.js, Express.js, JavaScript, React.js, REST APIs, MongoDB
Tools: VS Code, Postman, Render, Vercel, npm

PROJECTS

1. Linux User Management & Automated Backup System
Technologies: Linux, Bash, Git, GitHub
- Developed Bash scripts to automate Linux user management and backup operations.
- Automated backup of specified directories and files.
- Worked with Linux users, permissions, directories and file management.
- Used Git/GitHub for version control and project management.
- Practiced Linux command-line troubleshooting and administration.

2. Two-Tier Application Containerization
Technologies: Docker, Docker Compose, Docker Scout, Linux
- Containerized a two-tier web application and database using Docker.
- Created and managed Docker images and containers.
- Used Docker Compose to manage multi-container applications.
- Configured container networking, environment variables and persistent volumes.
- Used Docker Scout for container image vulnerability scanning.
- Applied container security and deployment best practices.

3. GitLab CI/CD Pipeline for Application Deployment
Technologies: GitLab CI/CD, Docker, AWS EC2, Linux
- Developed a CI/CD pipeline using GitLab for automated application deployment.
- Containerized the application using Docker.
- Deployed the Dockerized application on AWS EC2.
- Configured automated build and deployment workflows.
- Worked with Git repositories, pipeline stages and deployment configurations.
- Troubleshot Docker, Linux and deployment-related issues.

4. ChatNova AI – Real-Time AI Chat Application
Technologies: MERN, Node.js, Express.js, MongoDB, Socket.IO, AI
- Developed a real-time AI chat application using the MERN stack.
- Implemented real-time communication using Socket.IO.
- Developed REST APIs using Node.js and Express.js.
- Used MongoDB for users, chats and messages.
- Deployed application components using Render and Vercel.
- Managed environment variables and production deployment configuration.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science & Engineering
Dr. A.P.J. Abdul Kalam Technical University (AKTU), Lucknow — 2022 – 2026

CERTIFICATIONS & TRAINING

- DevOps Certification – Udemy
- MERN Stack Development – Udemy
- Data Science & Analytics – Udemy
- 90 Days Web Development Training – DigiCoders, Lucknow: hands-on experience with MERN Stack to build and deploy websites

KEY SKILLS

Linux Troubleshooting • Python Scripting • Application Support • Docker • AWS • CI/CD • Deployment Support • Incident Troubleshooting • Problem Solving • Technical Support
